

Biodiversity, Land Use, and Climate: Evolution of Three LCLUC-Funded Projects

**Andrew Hansen
Montana State University**

**Jack Liu
Michigan State University**

**Volker Radeloff
University of Wisconsin**

NASA Land Cover Land Use Change Annual Meeting

April 4-6 2007

LCLUC History

- **Started in mid 1990's.**
- **Focused on the causes and consequences of land change.**
- **Novel in integrating natural and social sciences.**
- **Eclectic group of geographers, sociologists, economists, ecologists.**
- **Regional case studies relying on first satellite-based land change detection**
- **In retrospect, extremely innovative and groundbreaking.**

Topics

A tale of three LCLUC biodiversity P.I.s

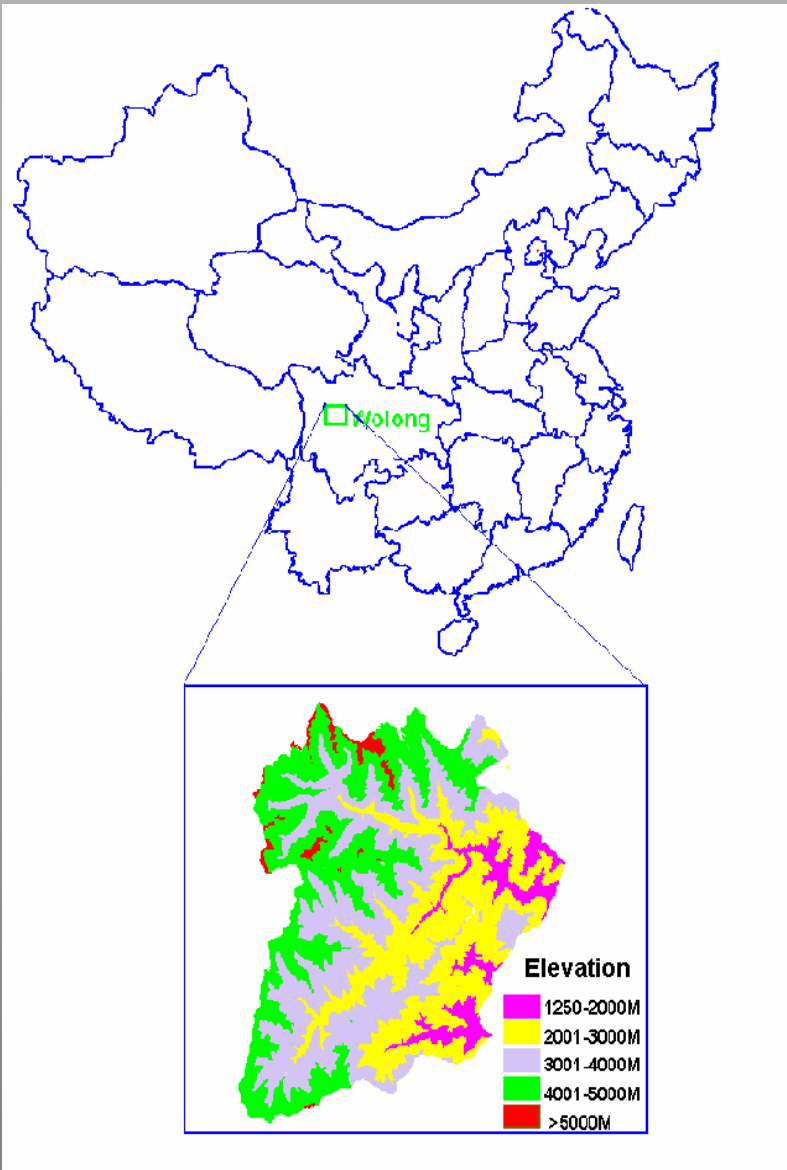

- **Jack Liu – Human consumption as a driver of biodiversity impact**
- **Andy Hansen – Biophysical influences on biodiversity and land use**
- **Volker Radenoff – National sociopolitical system influence on biodiversity**

Human Impacts on Panda Habitat

Jianguo (Jack) Liu (PI)
(with many collaborators)

Center for Systems Integration and Sustainability
Michigan State University
<http://www.csis.msu.edu>

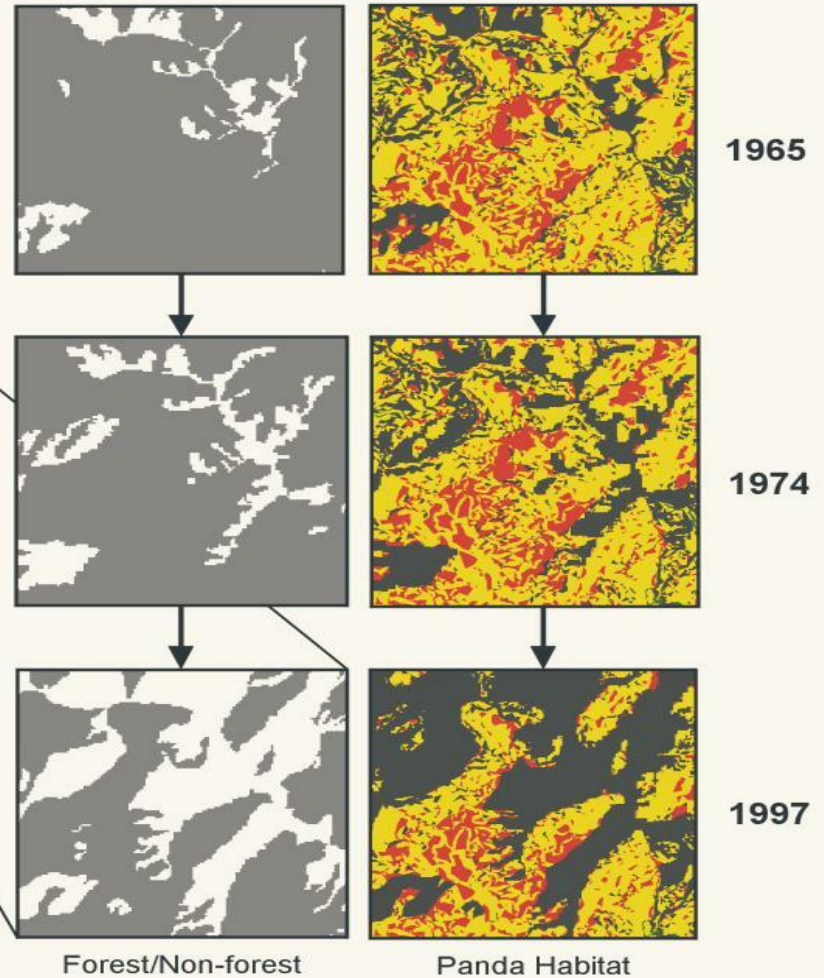

Wolong Nature Reserve

- One of the largest (200,000 ha)
- 10% of wild pandas (~1,600)
- Local residents (> 4,500)

Forest Distribution in 1997

Changes in Forest and Panda Habitat in an Example Area

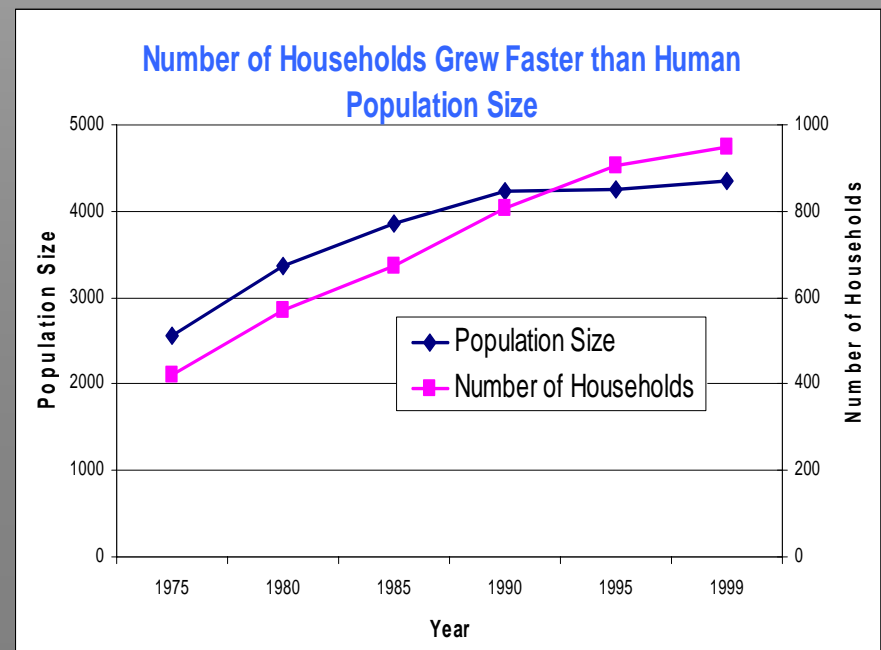

Highly suitable habitat declined from 14,000 ha to 12,000 ha

Why?

Household Production and Consumption as an Important Driving Force behind Habitat Degradation

Housing, fuel wood, agriculture

Extend Findings to Other Areas

- Do households increase faster than human population sizes at national and global levels?

Rates of Growth of Populations and Households (1985-2000)

Reduction in Average Household Size is a Main Reason for Faster Household Growth

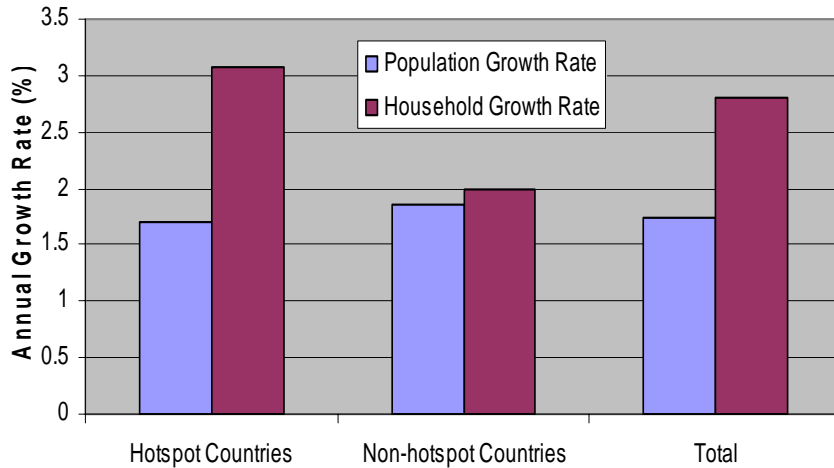

Liu et al. 2003

Extend Findings to Other Areas

- Do households increase faster than human population sizes at national and global levels?

What are the implications of growth of population x consumption for sustaining biodiversity??

Rates of Growth of Populations and Households (1985-2000)

Reduction in Average Household Size is a Main Reason for Faster Household Growth

Liu et al. 2003

Policies Enacted to Protect and Restore Habitat

Eco-hydropower Plant (2002 →)

To eliminate fuelwood consumption

Natural Forest Conservation (2001 →)

To prevent illegal harvesting

Grain-to-Green (2000 →)

To return cropland to forest

Policies Enacted to Protect and Restore Habitat

Eco-hydrology
(2002)

- Local case study leads to better understanding of global trends

- Local change analysis allows society to visualize change and enact policy

- Improved local sustainability – led to advances in global sustainability?

To eliminate fuelwood consumption

To prevent illegal harvesting

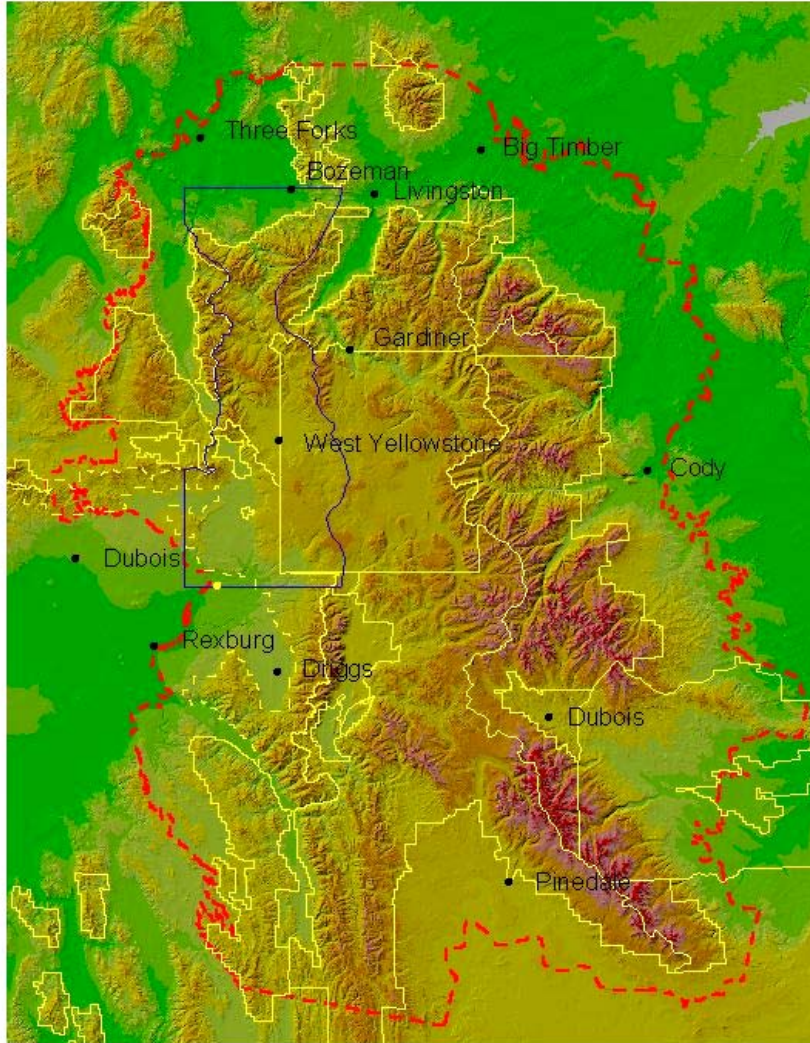

To return cropland to forest

Ecology and Socioeconomics in the New West: A Case Study from Greater Yellowstone.

Hansen et al. 2002. BioScience.

1. 25-Year History of GYE: Exurban growth largest land use change.

2. Causes and Consequences:

- Biophysical factors limit high biodiversity to hot spots;
- Biophysical factors also limit exurban development to same landscape locations with negative impacts on biodiversity ;
- Natural amenities drive of exurban growth;

3. Risk: Future growth can be placed to reduce impacts on biodiversity.

MODIS Products and Bird Diversity

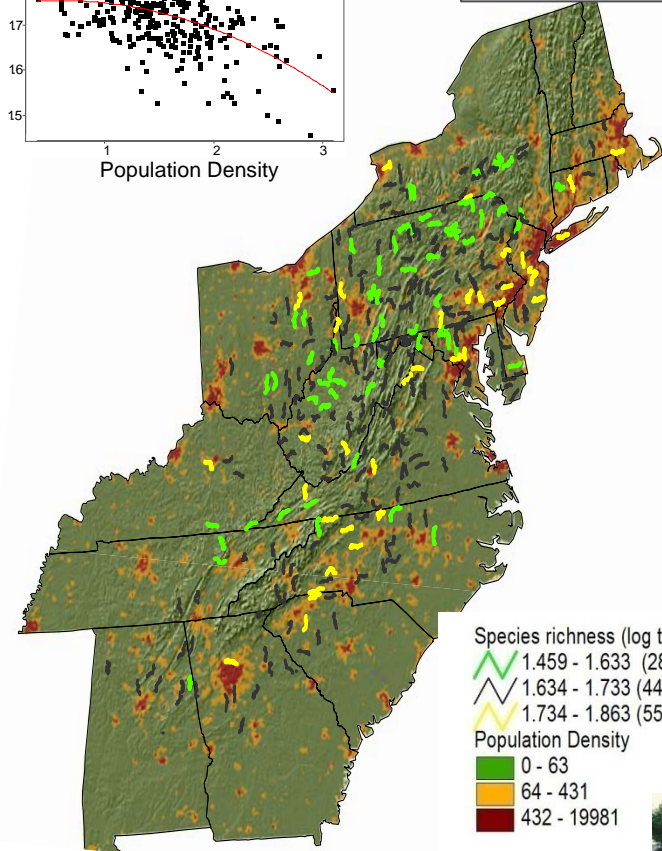

Bird diversity is related to ecosystem energy.

Spatial Distribution of Energy/bird Relationship

Ecoregions lie on different portions of the unimodal relationship.

Mid-Energy Ecoregions: Appalachians

Managing along Biophysical Gradients

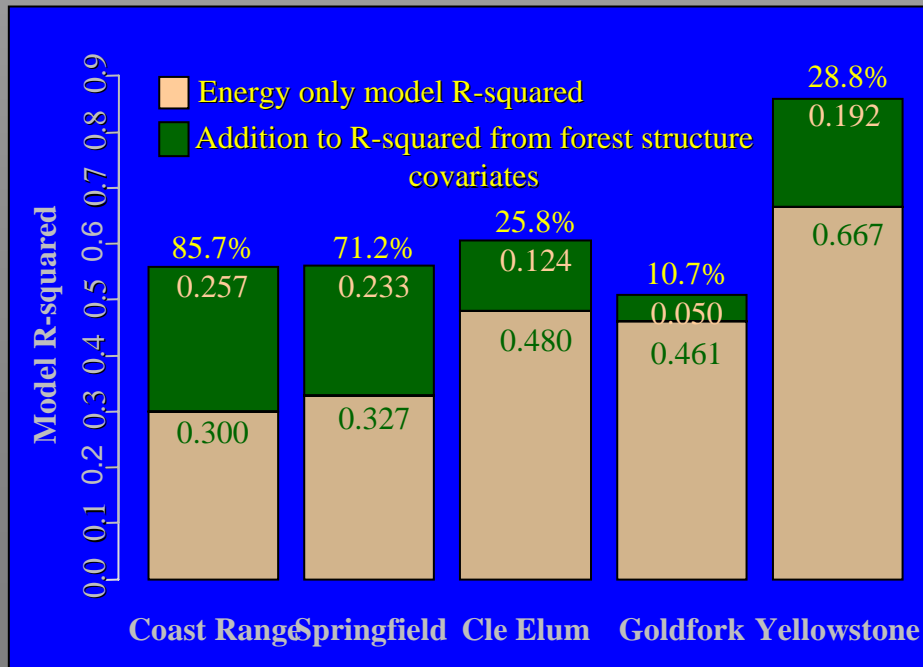

Managing along Biophysical Gradients

Conservation Category	Low Energy	Medium Energy	High Energy
Conservation Zones	Protect high energy places	Protect more natural areas	Protect low energy places
Disturbance	Use fire, flooding, logging judiciously in hotspots	Similar to “Descending”	Use disturbance to break competitive dominance
			Use shifting mosaic harvest pattern
			Maintain structural complexity
Landscape Pattern	Maintain connectivity due to migrations		Manage for patch size and edge
Sensitive Species	Many species with large home ranges and low population sizes due to energy limitations		Forest interior species
Exotics		High exotics likely due to productivity and high land use	
Protected Area Size	Large	Smaller	Smaller
Land Use	Low overall	High overall	Moderate overall
	Focused on hot spots	Emphasize “backyard” conservation	More random across landscape
	Plan development outside of hotspots	Apply restoration	

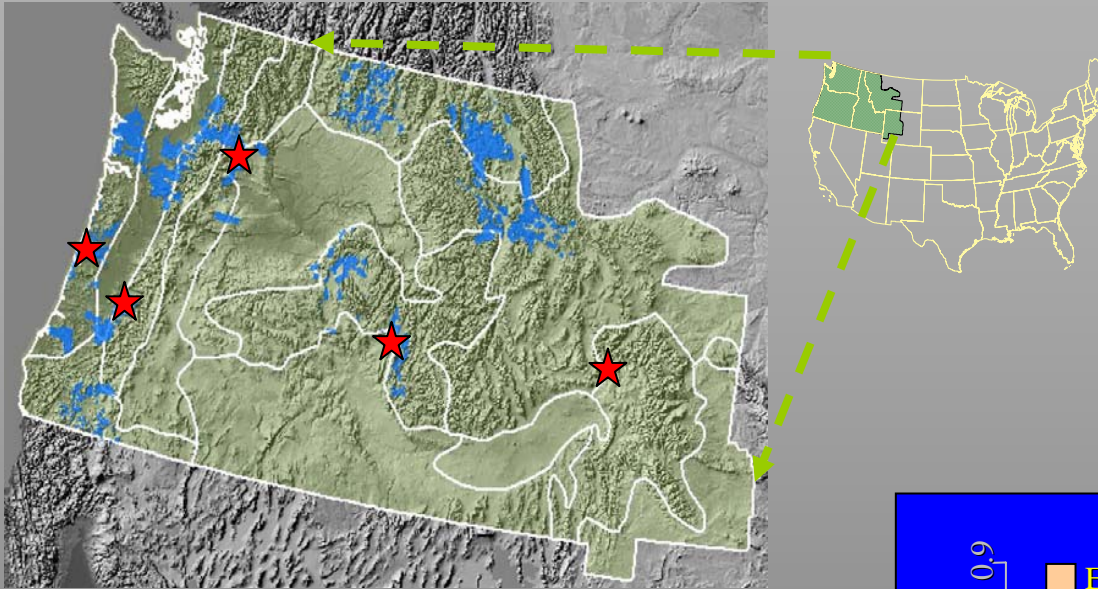

Does Ecosystem Productivity Modify Vegetation Structure Effects on Biodiversity?

Verschuyf et al. in prep.

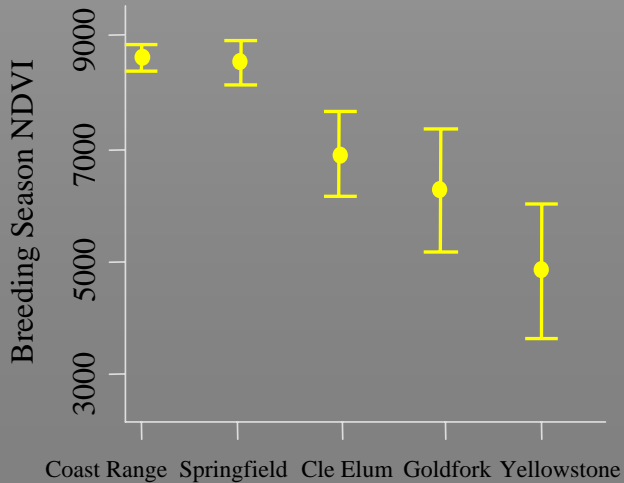

Does Ecosystem Productivity Modify Vegetation Structure Effects on Biodiversity?

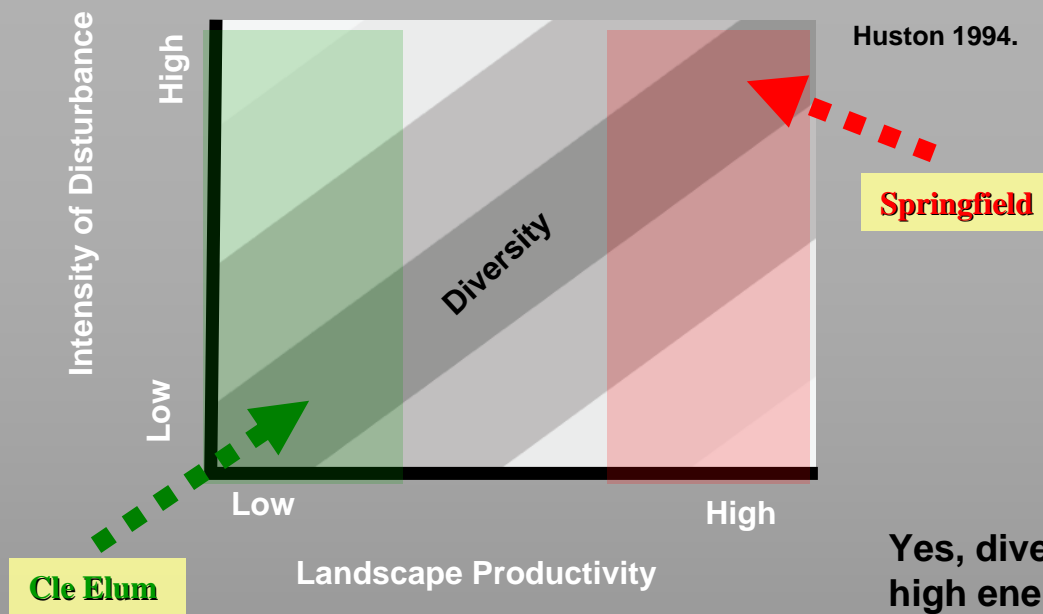

Verschuyf et al. in prep.

Yes, structure is most limiting in high energy systems.

Does Ecosystem Productivity Modify Disturbance Effects on Biodiversity?

McWethy et al. in prep.

Yes, diversity increases with disturbance under high energy and decreases under low energy.

Does Ecosystem Productivity Modify Fragmentation Effects on Biodiversity?

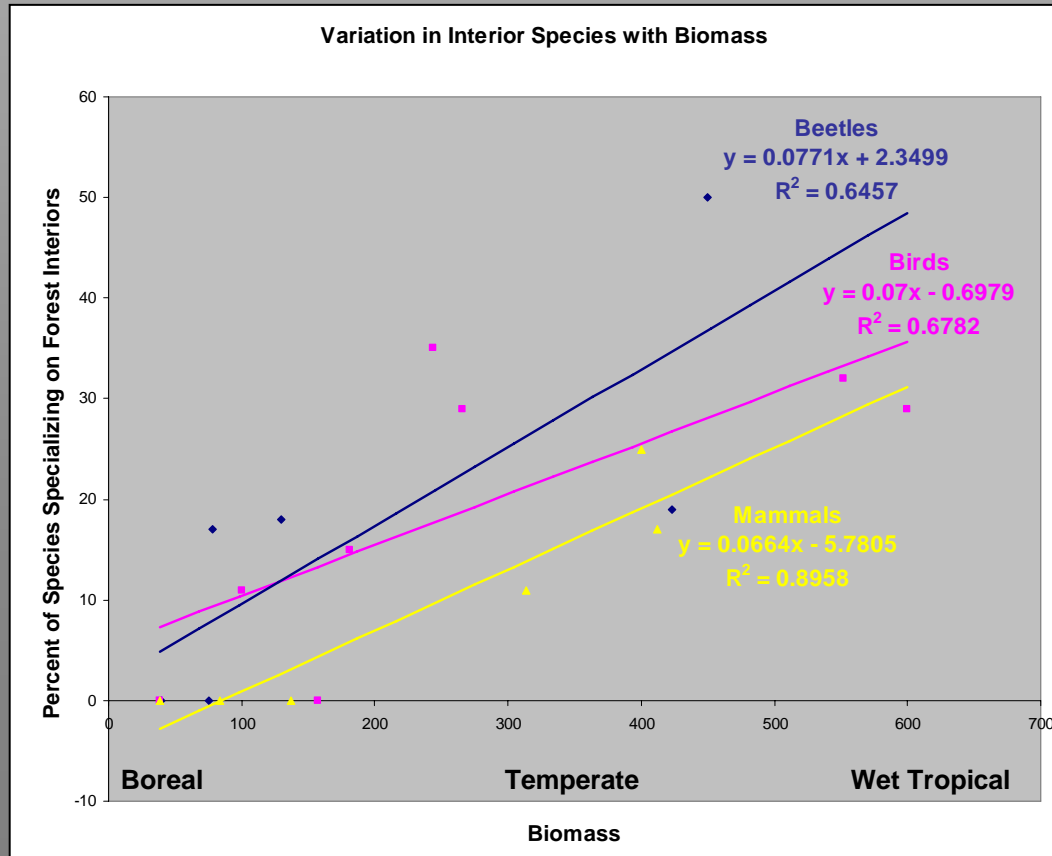

Hypothesis: Edge effects are more pronounced in high energy environments

High Biomass System

Low Biomass System

Yes, more species respond to edges in the more productive systems.

Land cover change in Eastern Europe and resulting effects on biodiversity

Volker C. Radeloff, M. Dubinin, A. Prishchepov, C. Alcantara
University of Wisconsin-Madison

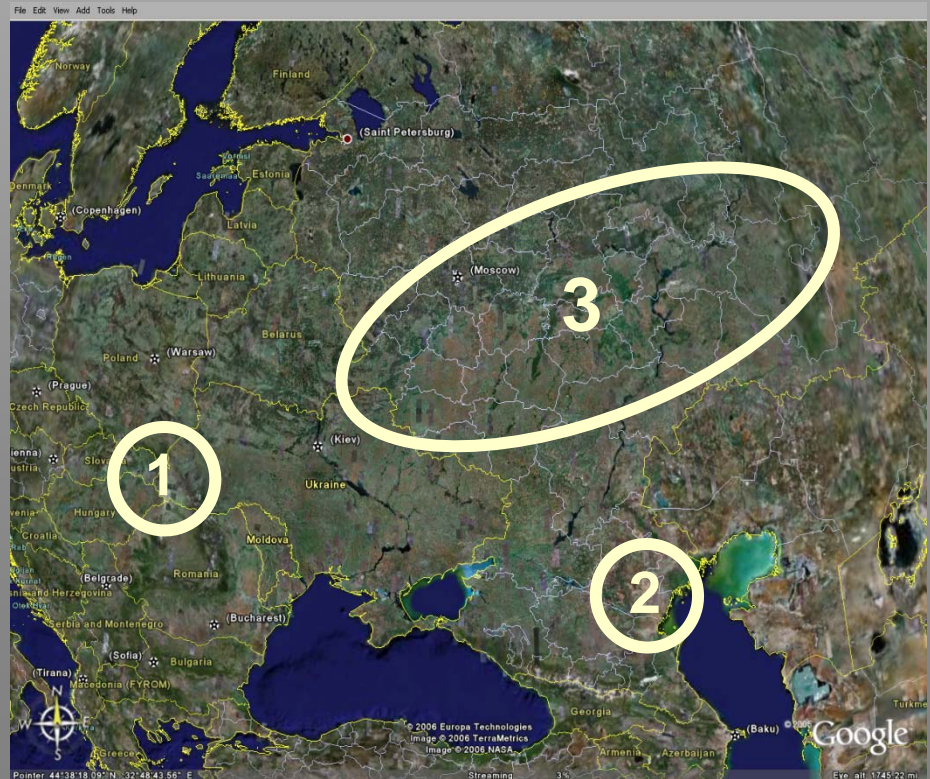

L. Baskin, and A. Lushchekina Russian Academy of Sciences
K. Perzanowski Polish Academy of Sciences

P. Hostert, and T. Kuemmerle Humboldt University, Germany

A NASA-LCLUC and NEESPI Project

Introduction

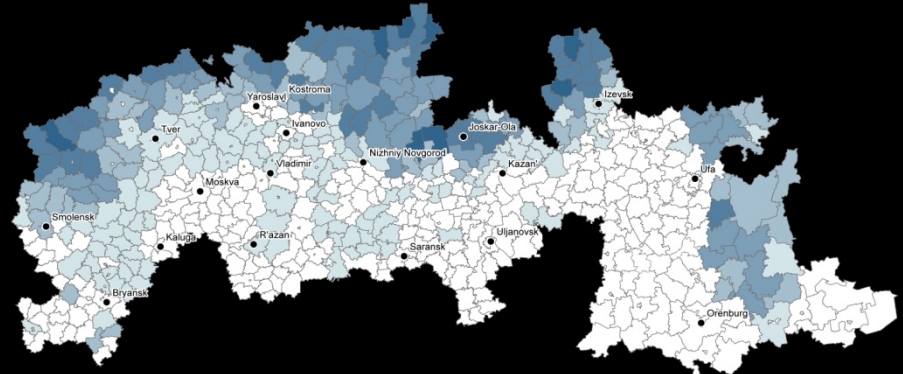

- ✦ In 1990, the Soviet Union broke down, and with it's control on eastern Europe
- ✦ How did this socioeconomic change affect LCLUC, and thus biodiversity?

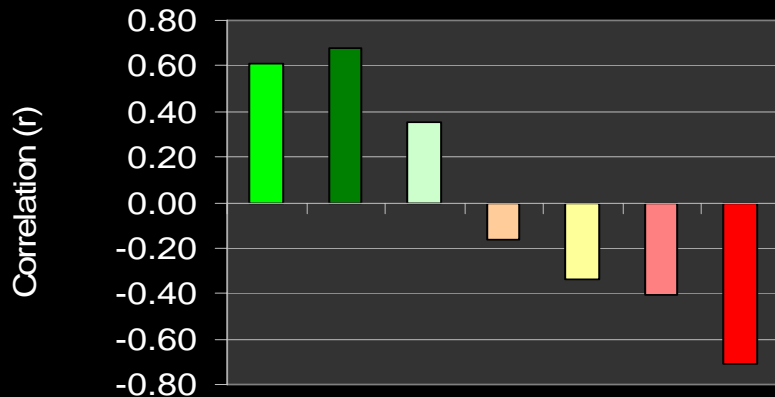

Brown bears in European Russia

Bear density in 2000

 Kuemmerle et al. 2007. *Ecological Applications*, in press
 Kuemmerle et al. 2007. *Remote Sensing of Environment*, in review

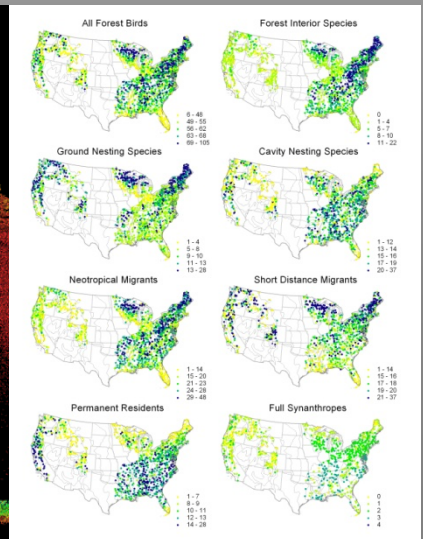

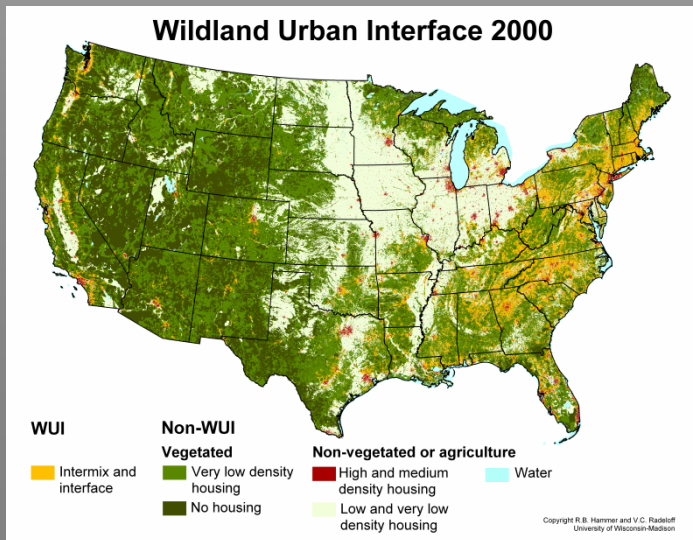

Eastern Europe LCLUC

- ✦ Parts of Eastern Europe are re-wilding
- ✦ Land use intensity is decreasing
- ✦ Remote sensing is great for habitat analysis and biodiversity science
- ✦ Important to identify conservation threats and opportunities

LCLUC/biodiversity projects in the U.S.

- ✦ NASA-Biodiversity: Remote sensing and avian biodiversity patterns in the United States
- ✦ NASA-IDS: Disturbance effects on avian biodiversity
- ✦ DoD-SERDP: Habitat monitoring for migratory birds
- ✦ US Forest Service: The wildland-urban interface in the U.S.
- ✦ Park Service: LCLUC near Pictured Rock and Indiana Dunes
- ✦ WI-DNR: LIDAR based forest bird habitat assessment

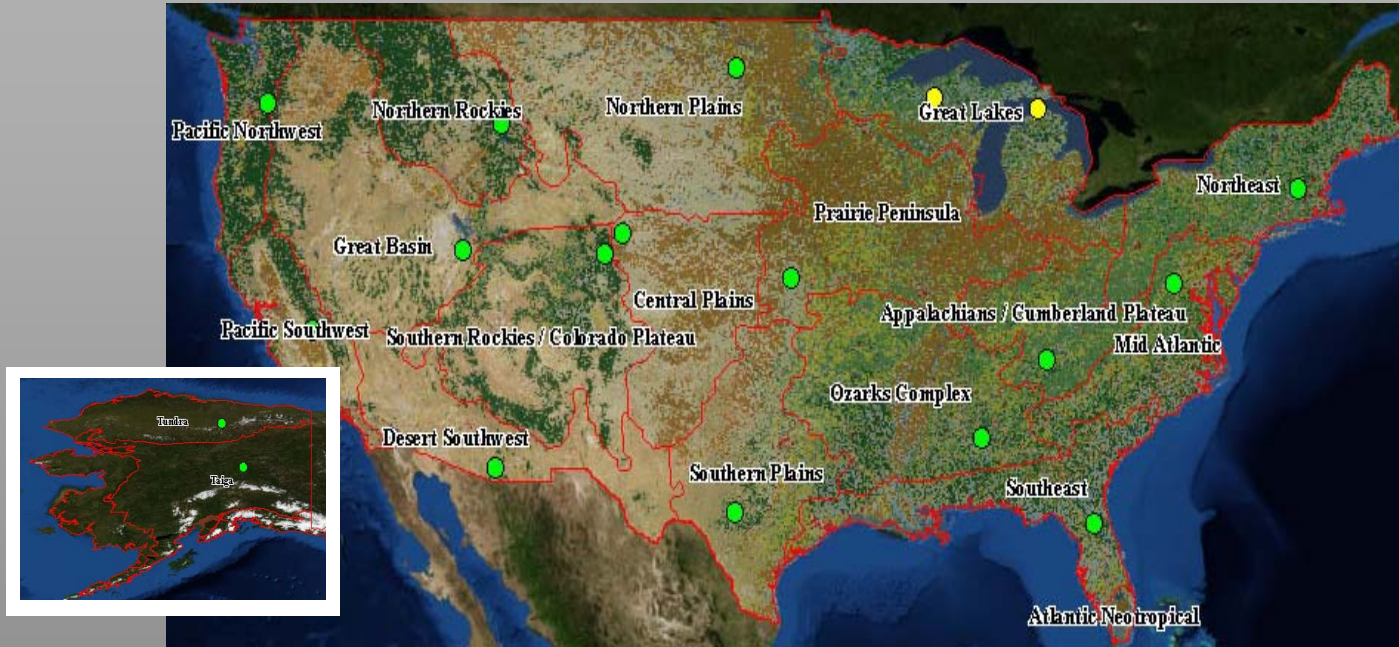

Conclusions

- **Highlighted development three labs under funding by LCLUC biodiversity.**
- **Stages of development:**
 - **Local case studies**
 - **Theory**
 - **Continental to global tests**
 - **Conservation and management**
- **This is true for many NASA P.I.s.**
- **LCLUC has also have strong positive impact on other programs: NSF Biocomplexity, USDA Managed Forests Ecosystems, most recently – NSF NEON.**

National Ecological Observatory Network

How will ecosystems and their components respond to changes in natural- and human-induced forcings such as climate, **land use**, and invasive species across a range of spatial and temporal scales?

NEON puts the LCLUC regional studies into a national design for long term study

Future Directions for LCLUC Biodiversity?

- **Making conservation biology spatial**
 - **Habitat structure vs productivity as drivers**
 - **Spatial variation in biophysical potential for biodiversity, land use, and biodiversity responses;**
 - **Use this to develop locally effective conservation and management**

- **Human population and consumption**
 - **(e.g., US is encouraging rapid population growth without evaluation of consequences)**
 - **Socioeconomic and ecological consequences of population size and consumption habitats**
 - **Managing natural amenities-based economies**

Future Directions for LCLUC Biodiversity?

- **Unpredicted thresholds of change in land use (e.g., soviet union)**
 - **Due to climate change?**
 - **Due to human sociopolitical systems**
- **LCLUC past, present, alternative futures**
 - **Elevate land use to level of climate change in public and policy discussions.**
 - **Evaluate the range of creative new land use designs now being employed**
- **Partner with NEON**
