# Field experiments in northern Europe: SNORTEX

**Terhikki Manninen**

<http://snow.fmi.fi/SNORTEX/>

8.9.2010

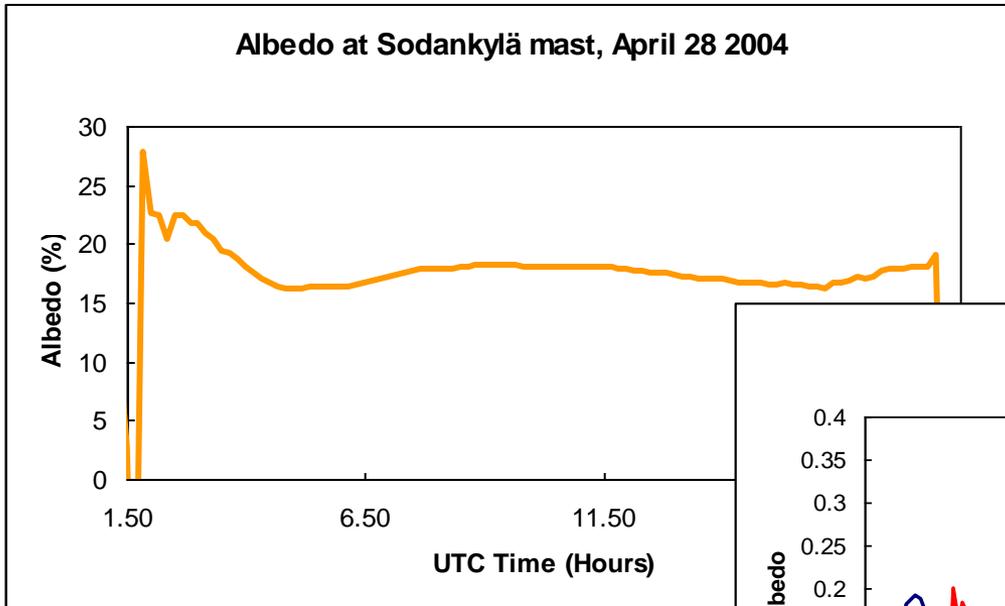

## Motivation and goals

- **One of the important questions of climate change is, whether the boreal forest edge will move northwards, which would decrease the surface albedo drastically (80% -> 20%)**
- **The main aim of the SNORTEX investigation is to measure the Bidirectional Reflectance Distribution Function (BRDF) of the European boreal ecosystem on a seasonal basis with the presence of snow.**
- **Normalization improvement of wintertime boreal forest albedo**
- **Validation of satellite based snow and albedo products.**

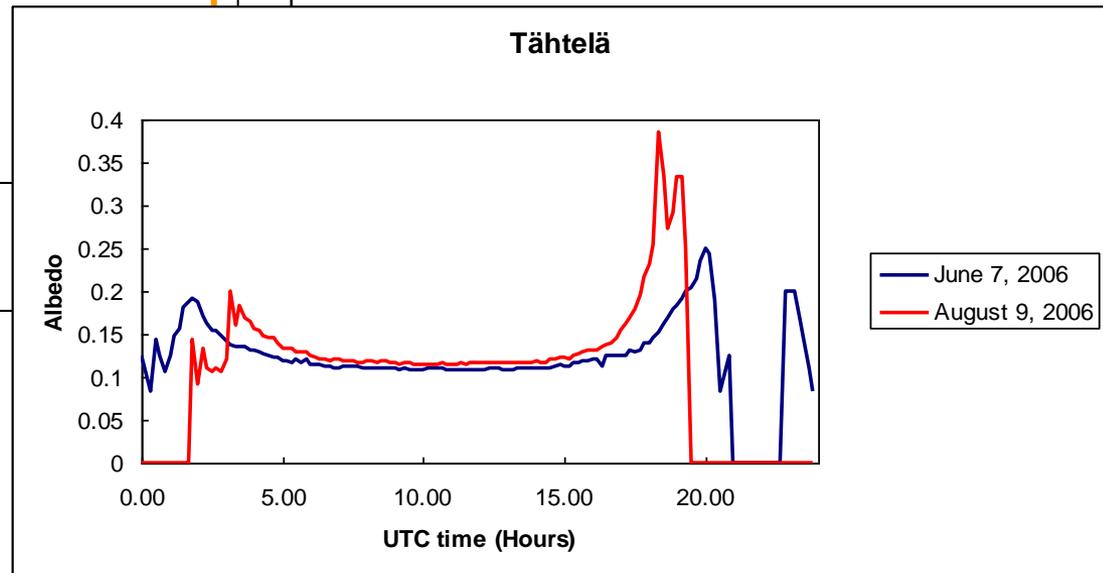

# Normalization improvement of wintertime boreal forest albedo

Terhikki Manninen and Pauline Stenberg, 2009, "Simulation of the effect of snow covered forest floor on the total forest albedo", Agricultural and Forest Meteorology, Vol. 149, No.2, pp.303-319.

Summertime normalization scheme may cause 40% overestimation of wintertime albedo

# Campaign participants

## **Météo-France:**

Jean-Louis Roujean, Olivier Hautecoeur

## **LGGE:**

Florent Dominé

## **Finnish Meteorological Institute**

Terhikki Manninen, Kati Anttila, Osmo Aulamo, Juha Karhu, Tuure Karjalainen, Stelios Kazantzis, Anna Kontu, Panu Lahtinen, Juha Lemmetyinen, Milla Lötjönen, Outi Meinander, Miia Pasuri, Suleiman Mostamandy, Aku Riihelä, Niilo Siljamo, Timo Sukuvaara, Hanne Suokanerva, Laura Thölix

## **Finnish Geodetic Institute**

Jouni Peltoniemi, Juha Suomalainen, Teemu Hakala, Eetu Puttonen

Sanna Kaasalainen, Harri Kaartinen, Antero Kukko, Henri Niittymäki, Anssi Krooks

## **University of Eastern Finland**

Lauri Korhonen

## **University of Helsinki**

Sabine Göke

## **SYKE (Finnish Environmental Institute)**

Olli-Pekka Mattila, Kirsikka Niemi, Kristin Böttcher

# Campaigns

2008 April 1-18

2009 I: March 9-20  
II: April 19-29  
III: May 4-8

2010 March 15-26

# Co-operation

## **University of Helsinki**

Pauline Stenberg

## **Finnish Forest Research Institute**

Pekka Voipio

# Airborne instruments

OSIRIS, 2008-2009	BRDF
4 Pyranometers	Global and reflected radiation
4 SL501 sensors	Incoming and reflected UV radiation
Humicap	Humidity
Thermometer (Pt-100)	Air temperature
Karhukamera, wide optics lense	Leaf area index (LAI)
Laser scanner, 2009	Height of vegetation
AISA spectrometer, 2010	Spectrum of reflected radiation

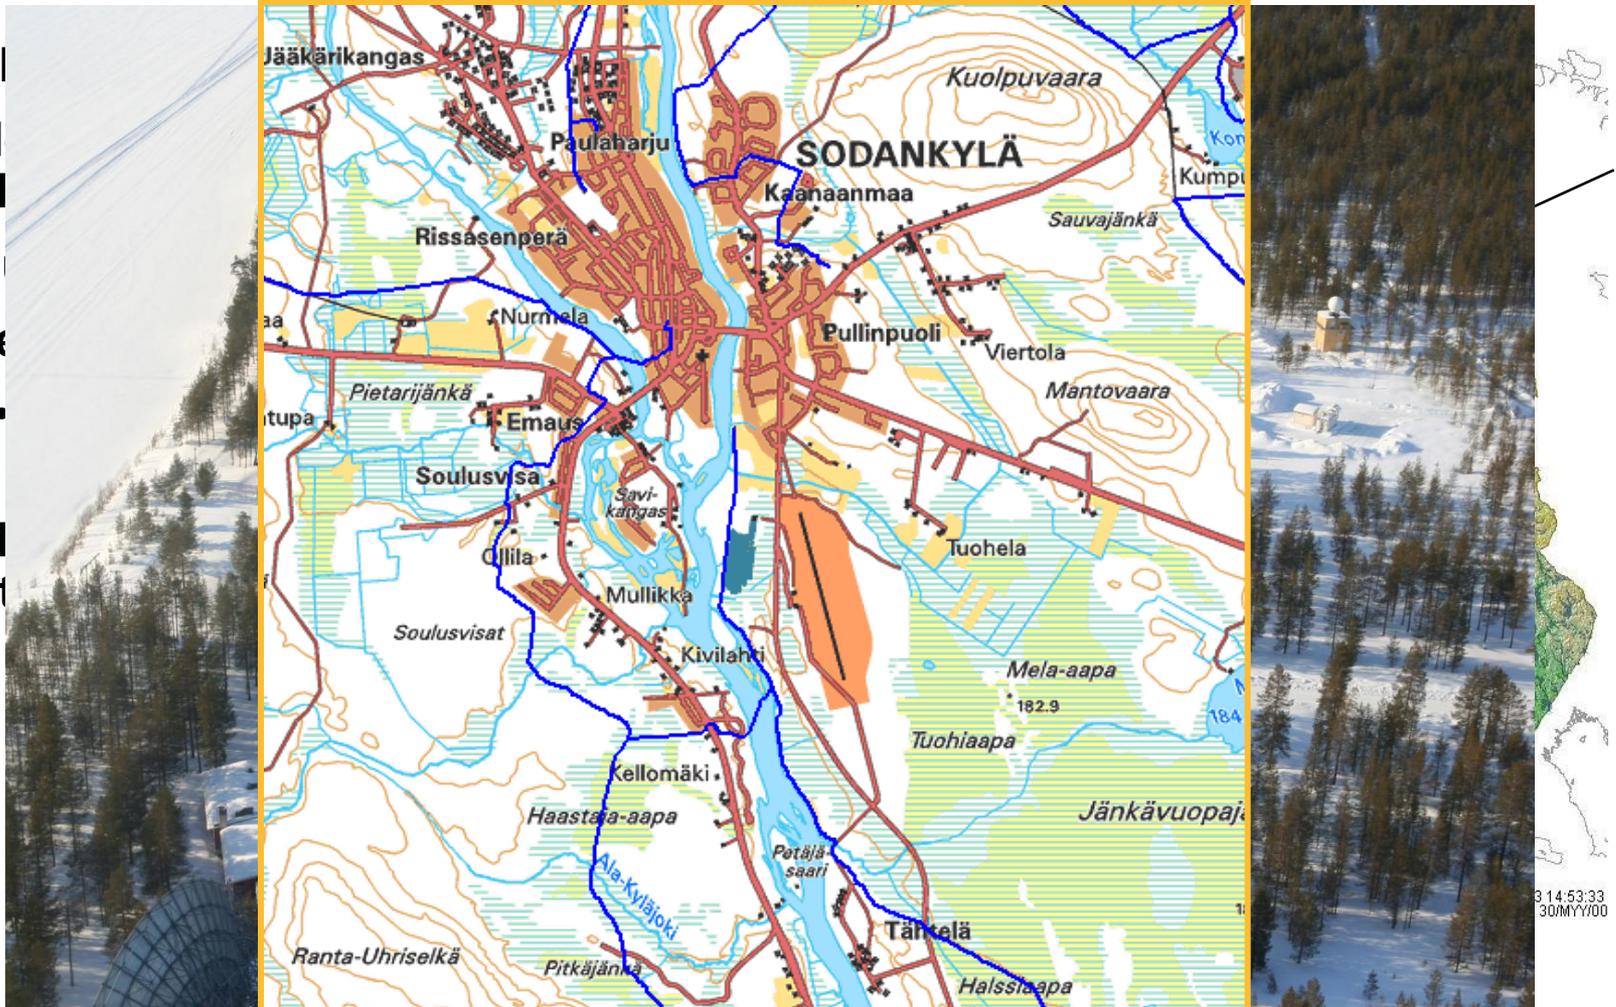

# Ground measurement instruments

Measurement stick, GPS	Snow depth, Fractional snow cover
Cylinder, spade and balance, Density measurement system	Snow density and water equivalent (SWE)
Infrared camera, camera and graded plate, Camera system	Snow grain size
Camera, graded plate, tacymeter	Snow surface roughness
Thermometer (Pt-100)	Air and snow temperature
Snow fork	Snow wetness, density
Albedometer	Global and reflected radiation
Spektrometer	Spectrum of global and reflected radiation
Hemispherical camera	LAI
Samples for analysis in Sweden	Snow surface impurities
Bentham	UV radiation
Terrestrial laser scanner (FGI)	3D snow surface
FiGiFiGo (FGI)	BRDF
HSD	Snow shape detector

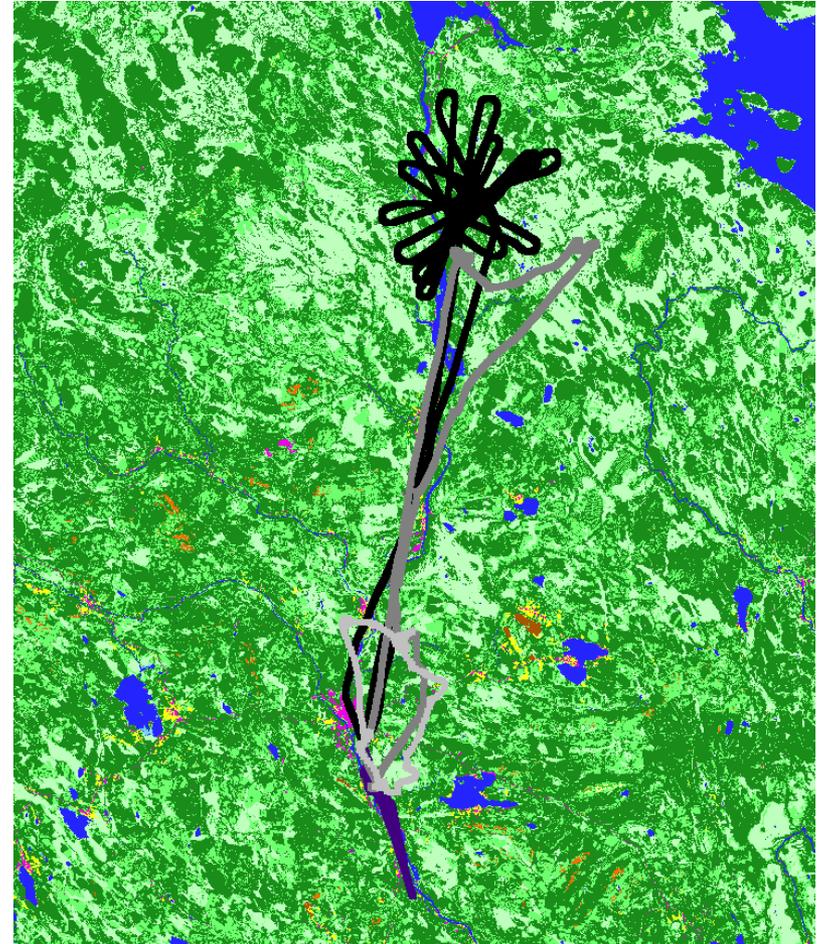

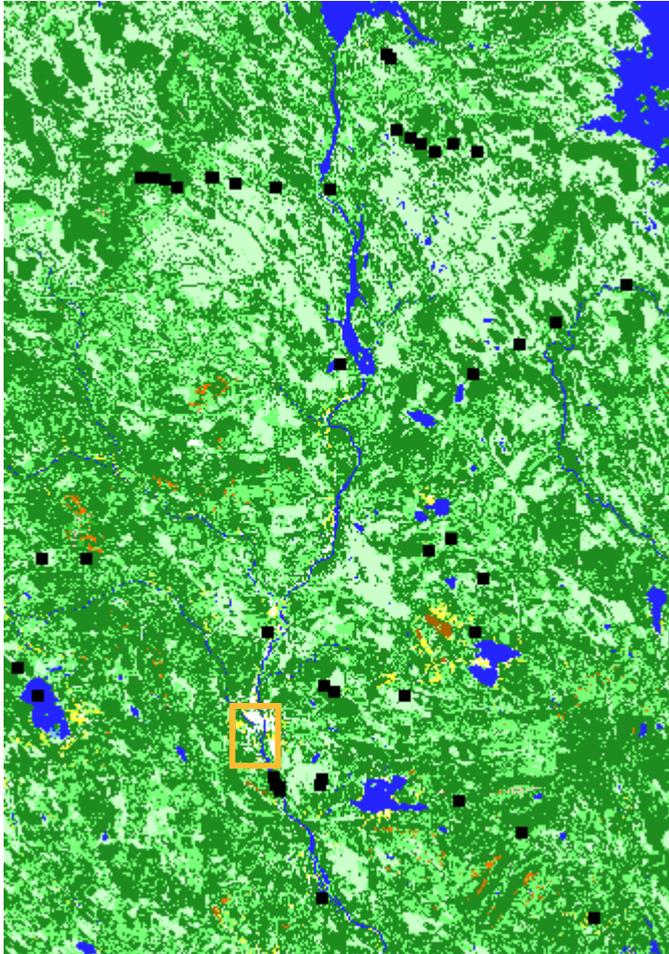

# Measurement site

- F
- N
- al
- S
- T
- 
- M
- O

# Measurement area 2008

Flights: April 2, April 3, April 7 and April 10

# Ground measurement area 2009 and 2010

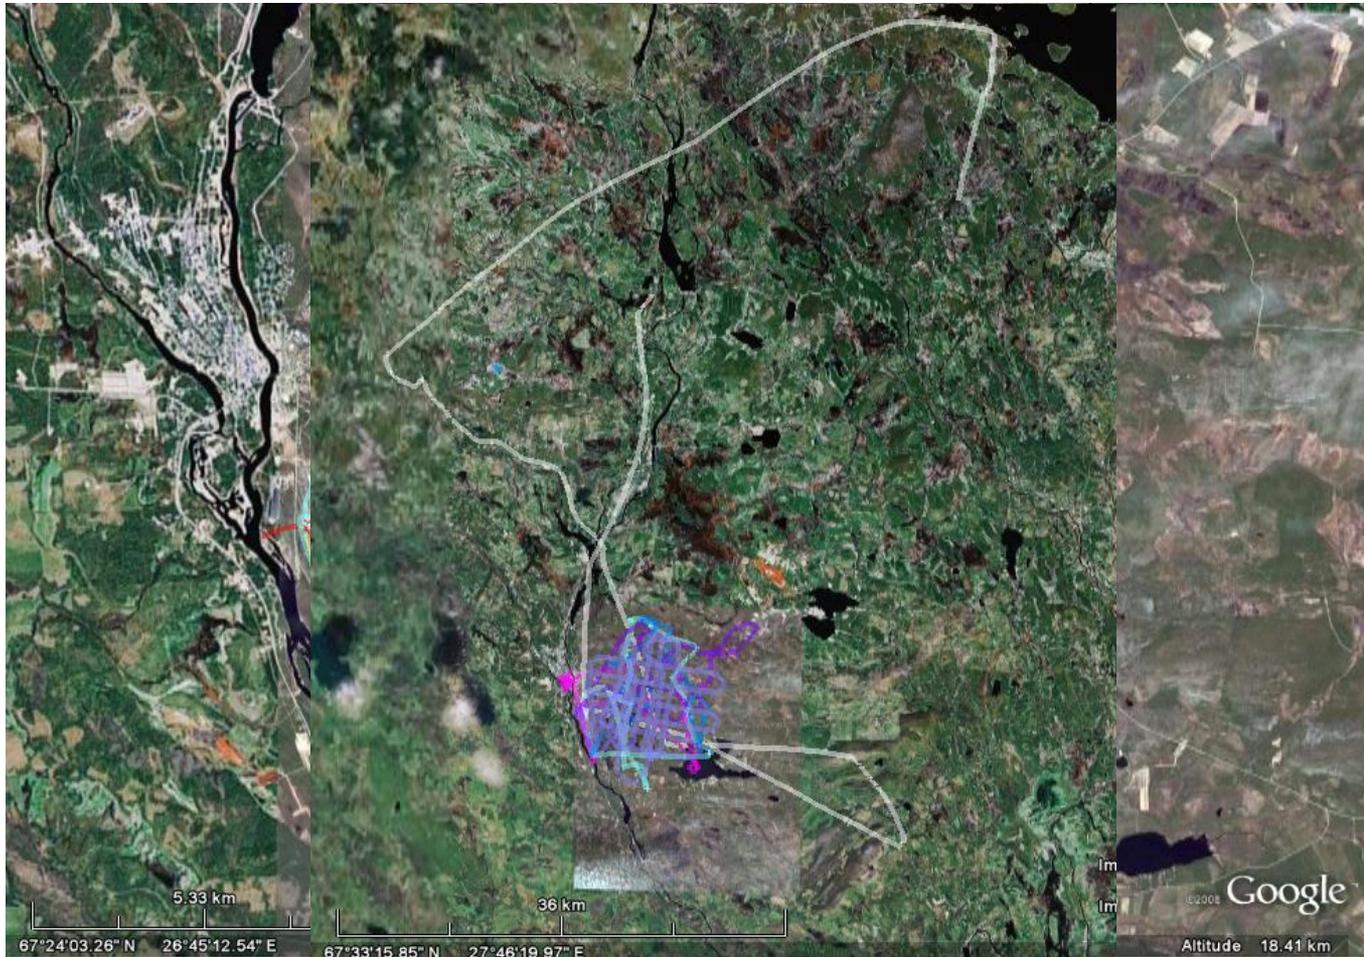

Land cover

Centre 67° 24.637'N, 26° 46.592'E (WGS84)

# Flights in April 2009

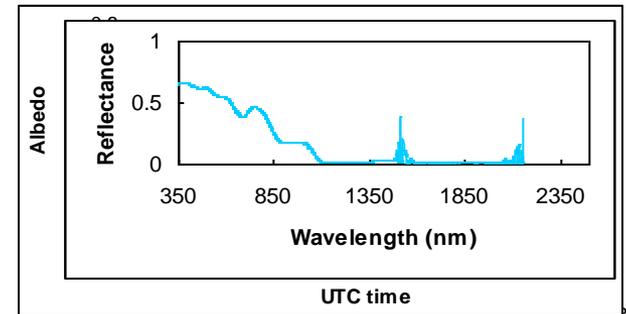

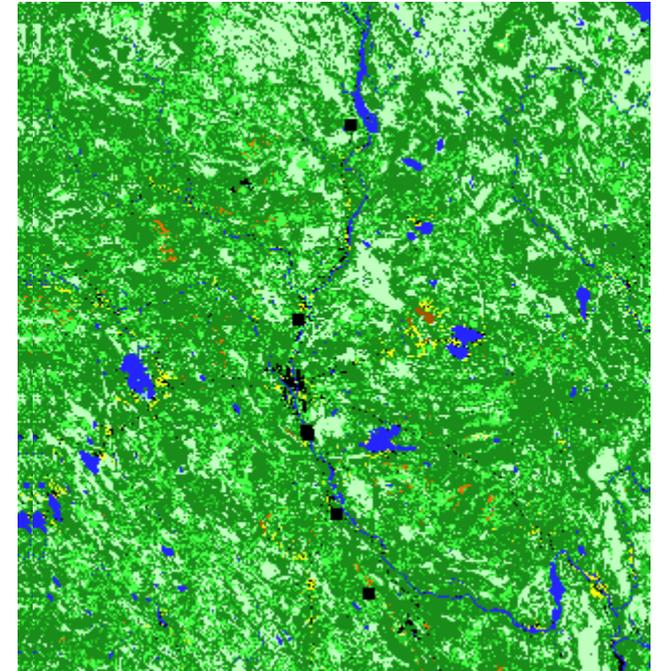

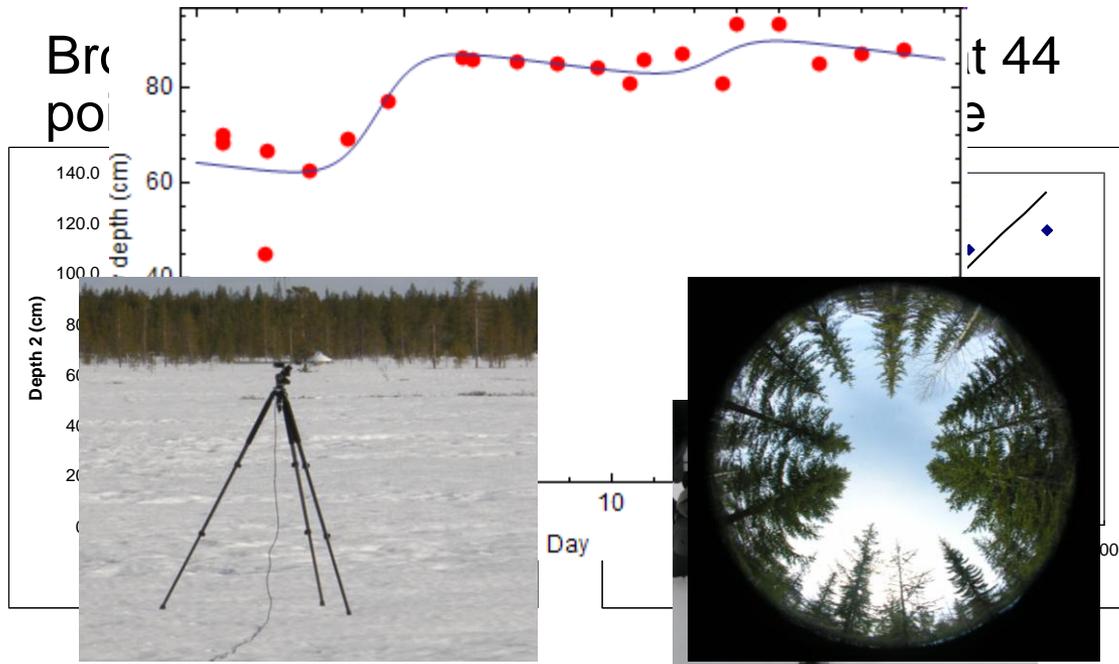

# Ground measurements April 1-18, 2008

- Altogether 118 snowpit measurement sets, out of which 23 at the NorSEN-mast (the last measurement of each day)
- 30 snowpit measurement points outside Tähtelä measured twice

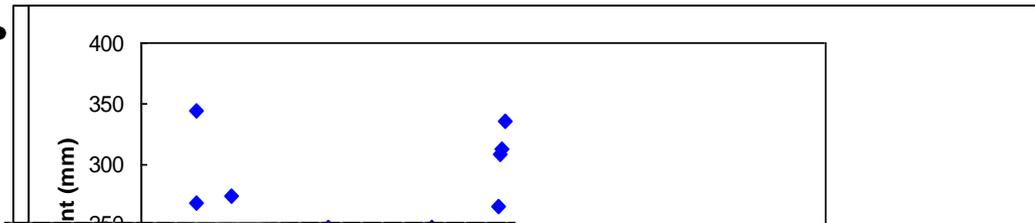

- Bro  
po

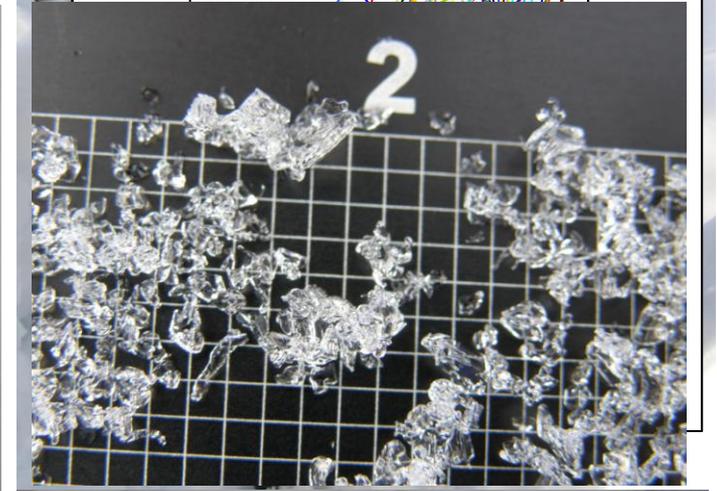

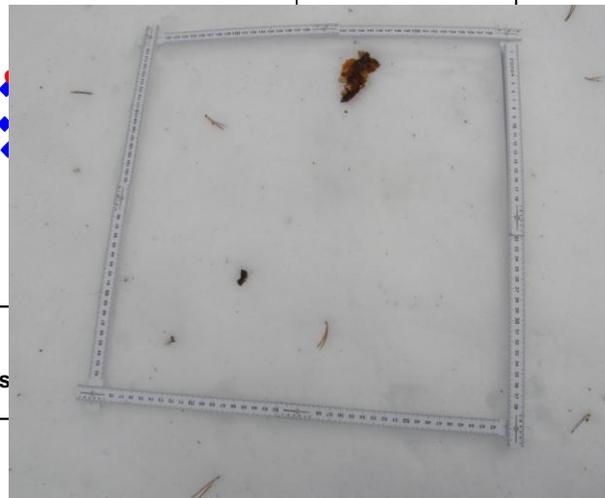

# Snow pit measurements April 1-18, 2008

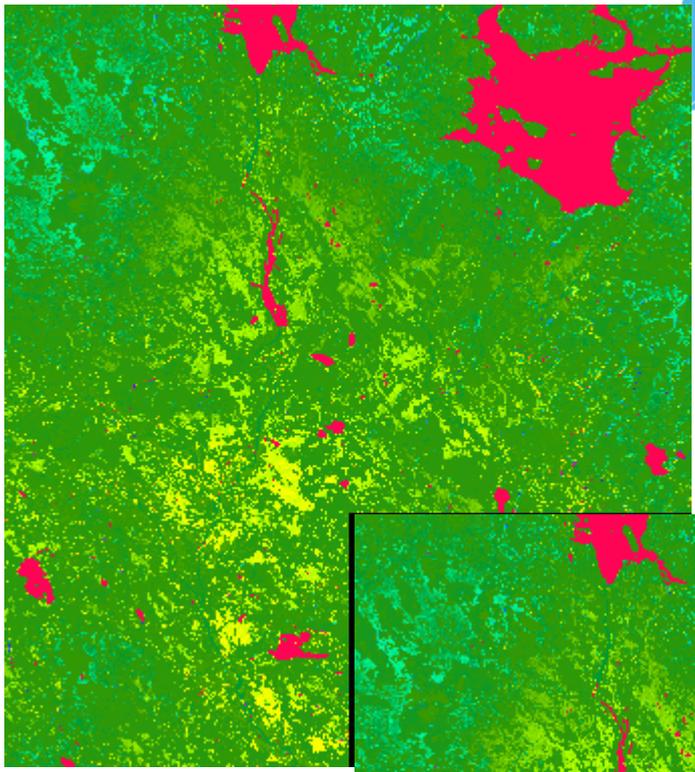

- Snow depth, density, snow water equivalent (SWE): more than 100 values
- Humidity and temperature profiles of snow at 7 measurements points

and

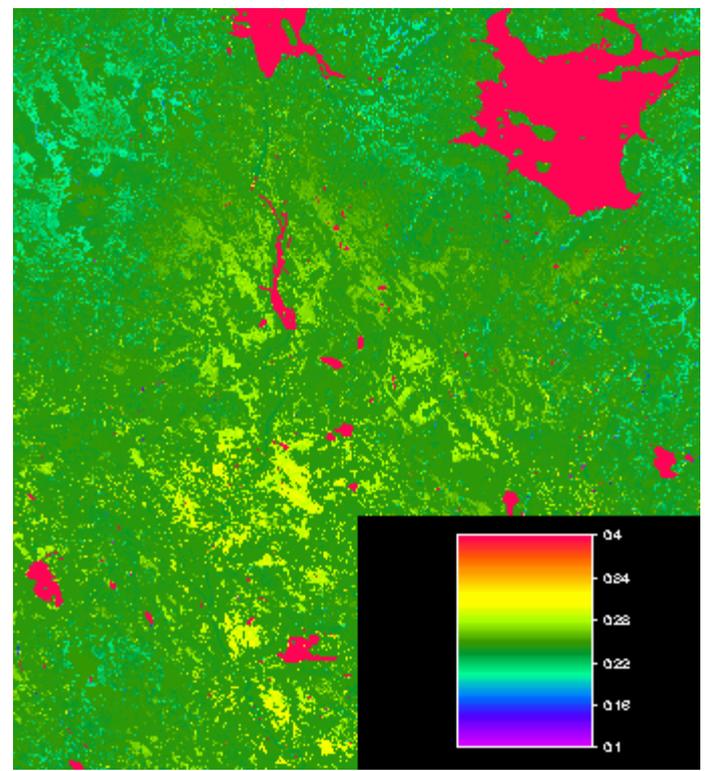

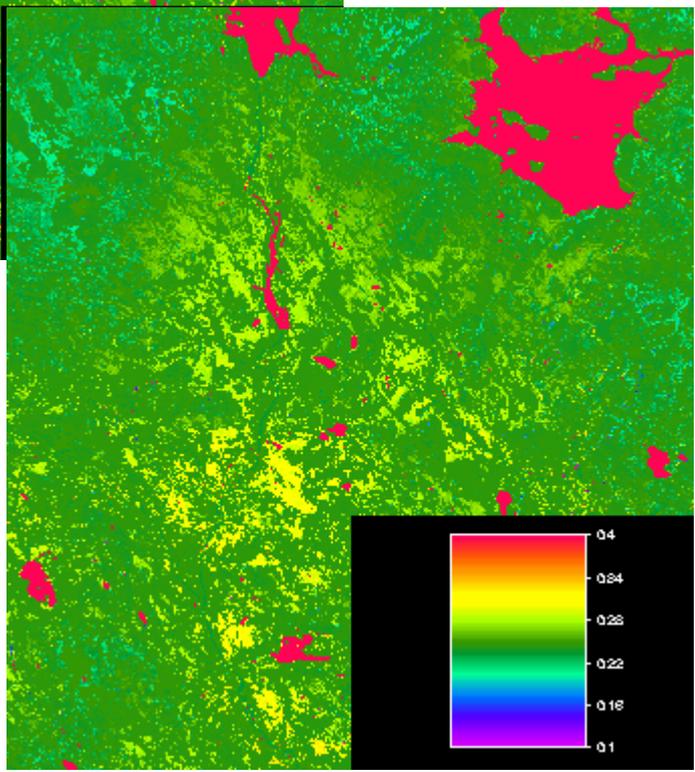

# Snow SWE density along the highlights

April 3, 2008

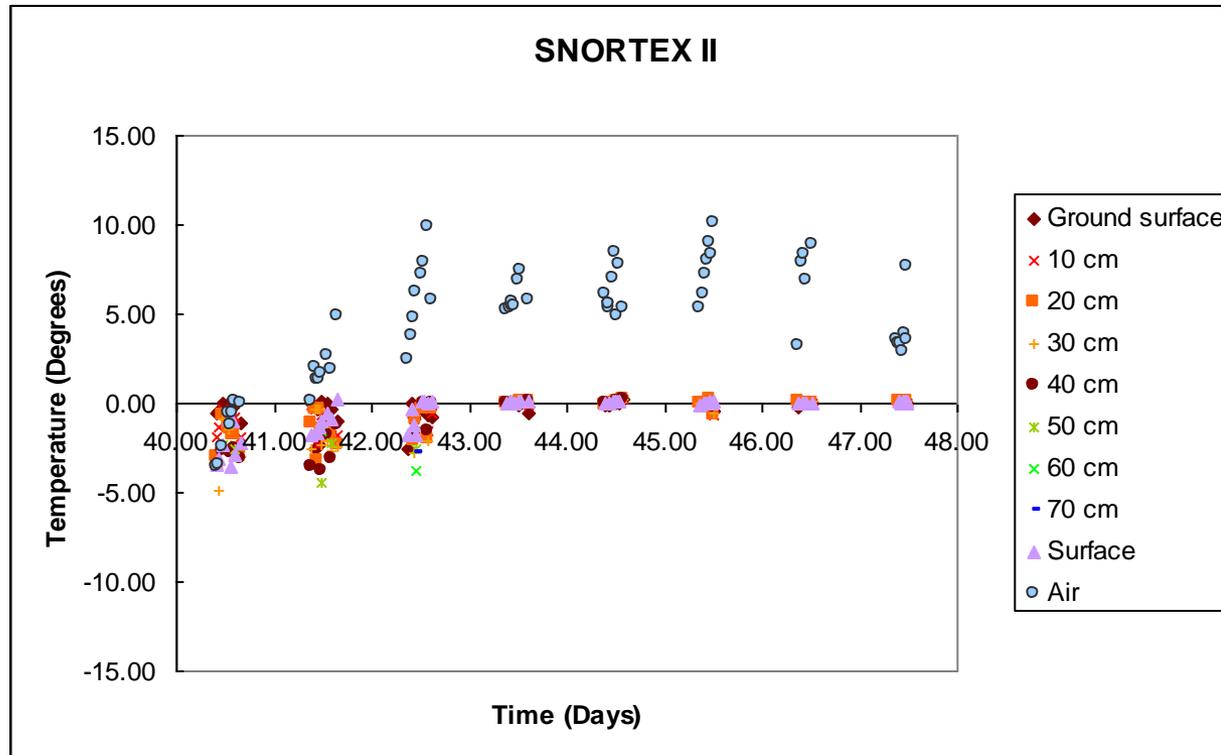

April 7, 2008

April 10, 2008

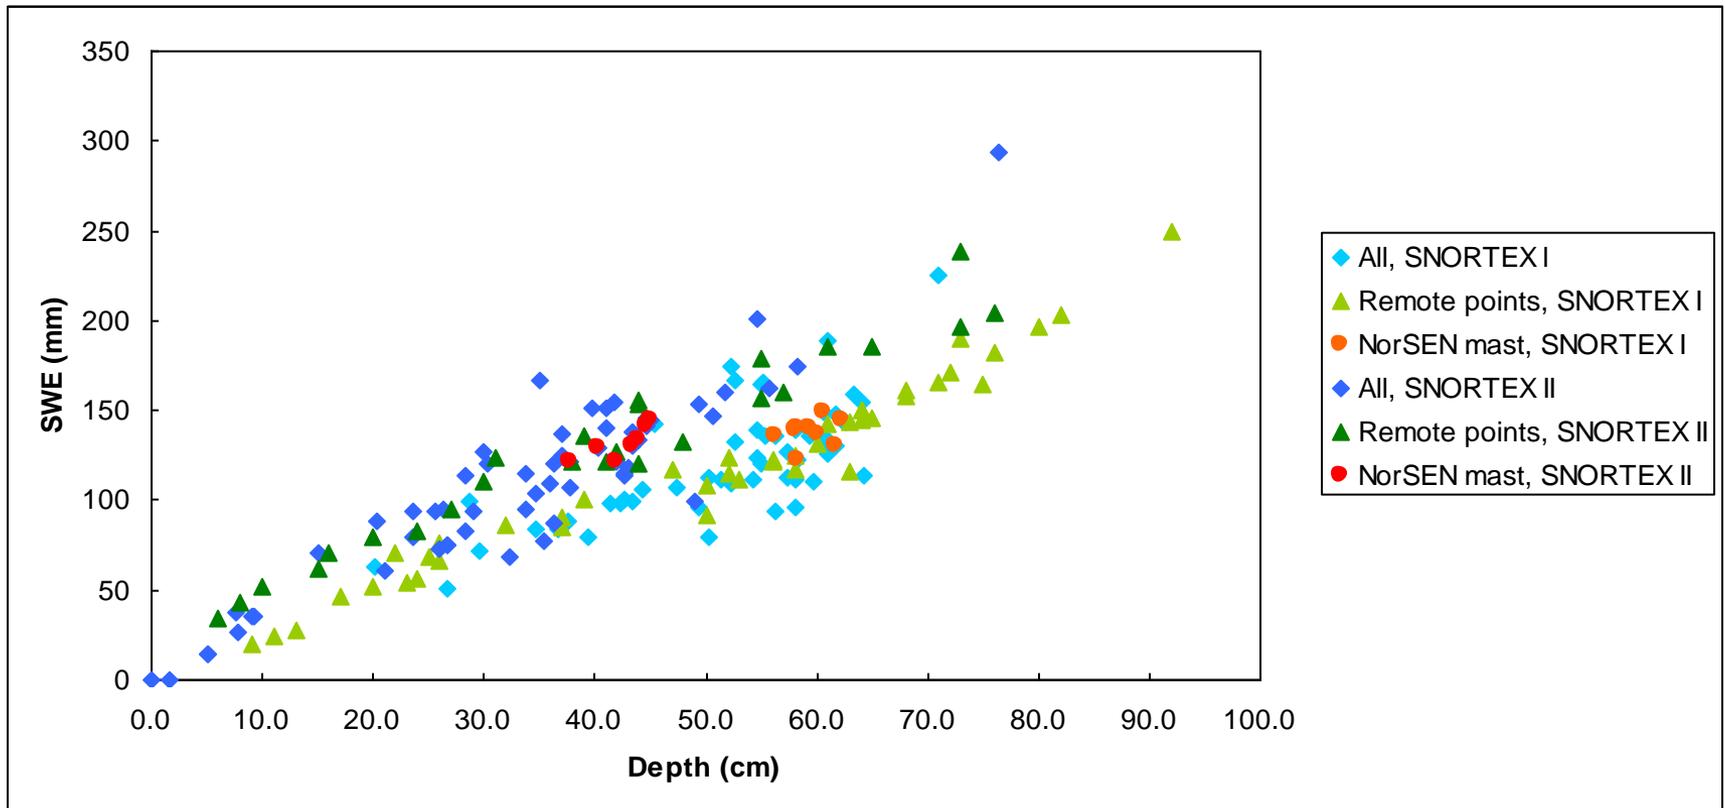

# Temperature during SNORTEX 2009 I and II

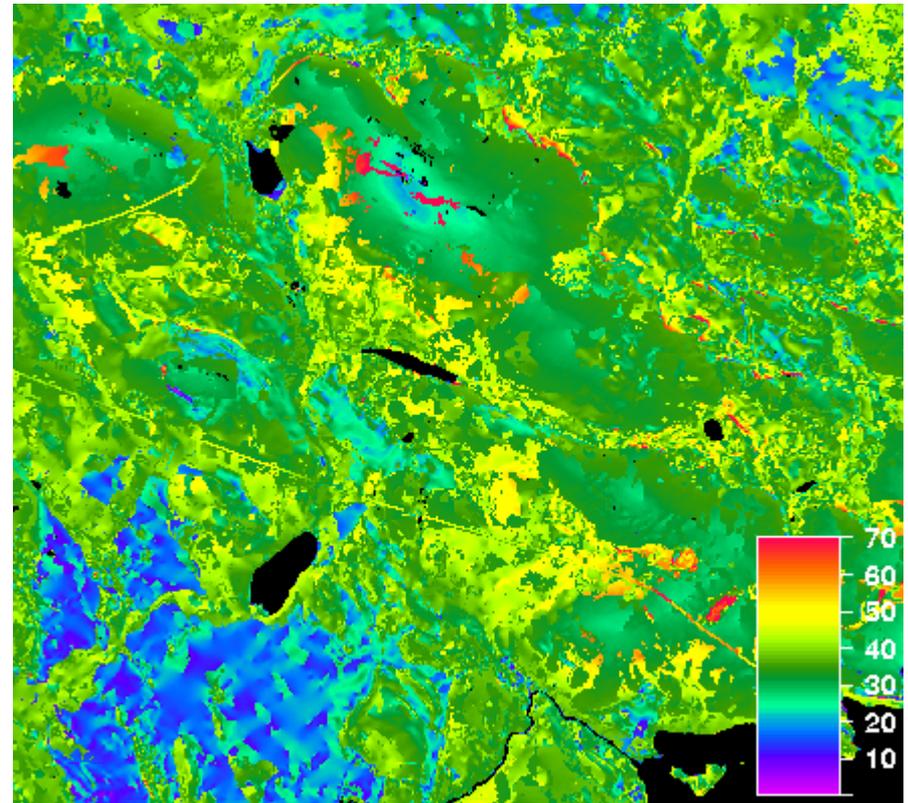

# Snow water equivalent vs. depth in 2009

# Snow depth generalization in 2009

- The snow depth varies with
  - Time
  - Land cover class
  - Terrain height
  - Terrain slope
  - Terrain aspect
  - Sun zenith angle
  - Sun azimuth angle

Open bogs  $R^2=0.81$

Coniferous forests  $R^2=0.86$

Deciduous and mixed forests  $R^2=0.86$

Sparse forests  $R^2=0.74$

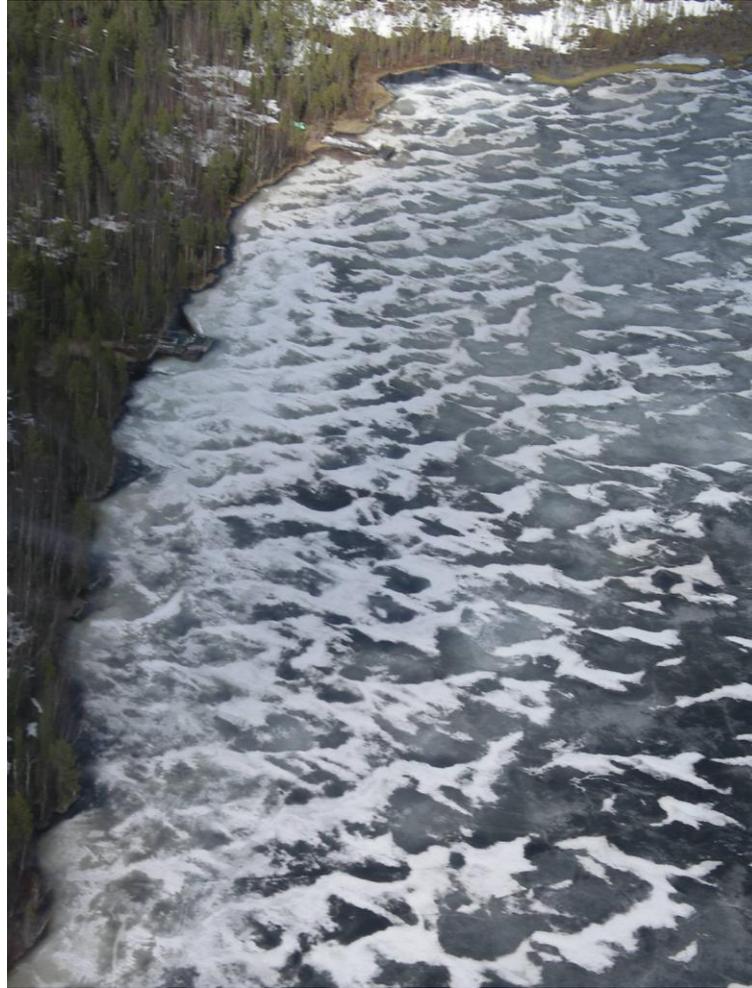

March 7, 2009

# Melting season and fractional snow cover

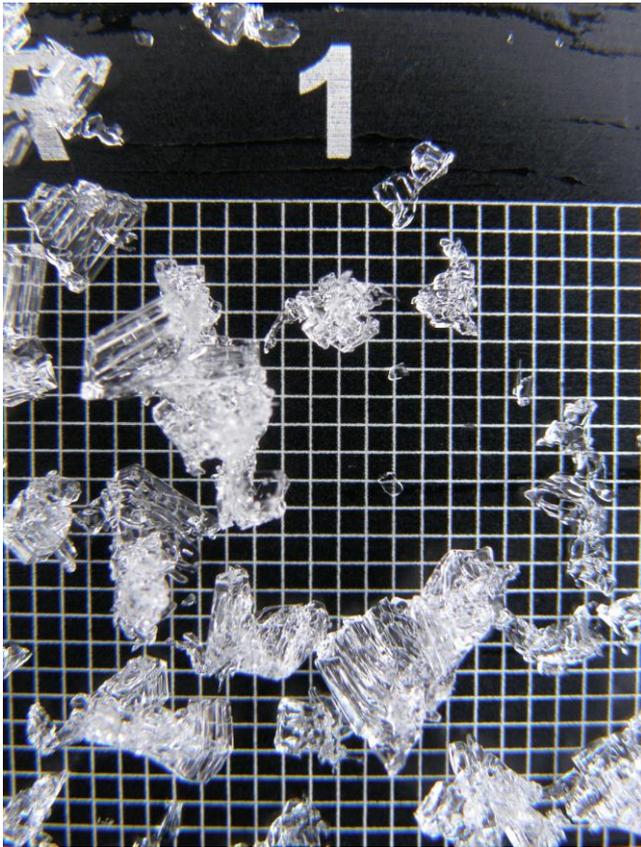

SNORTEX/FMI/Terhikki Manninen

# Grain size

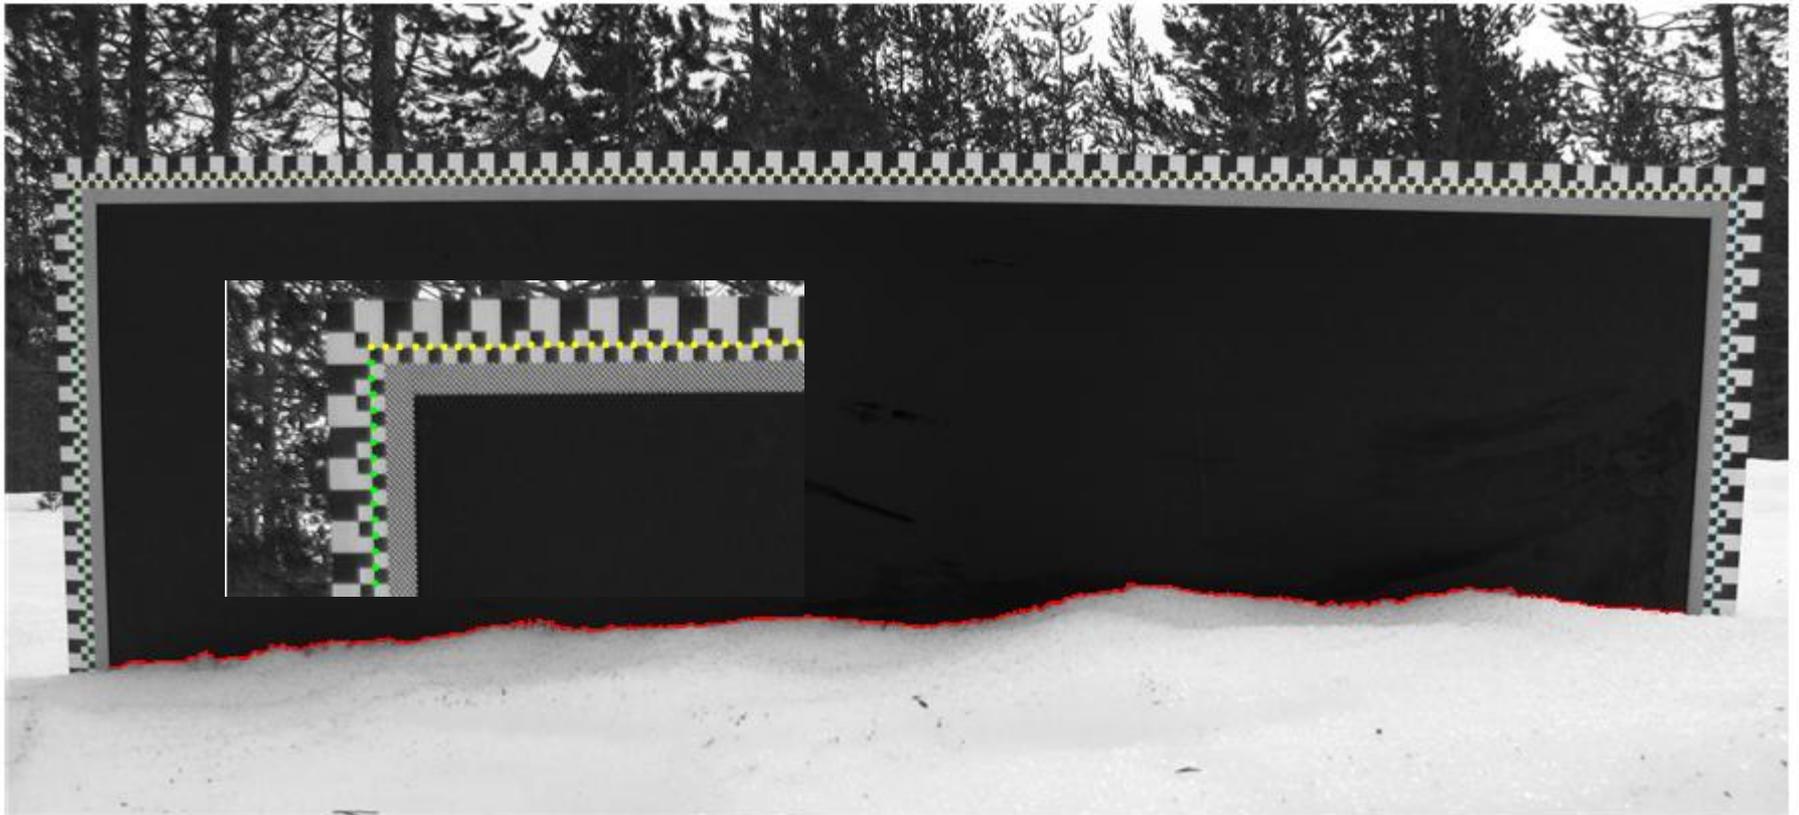

# Snow surface roughness measurements

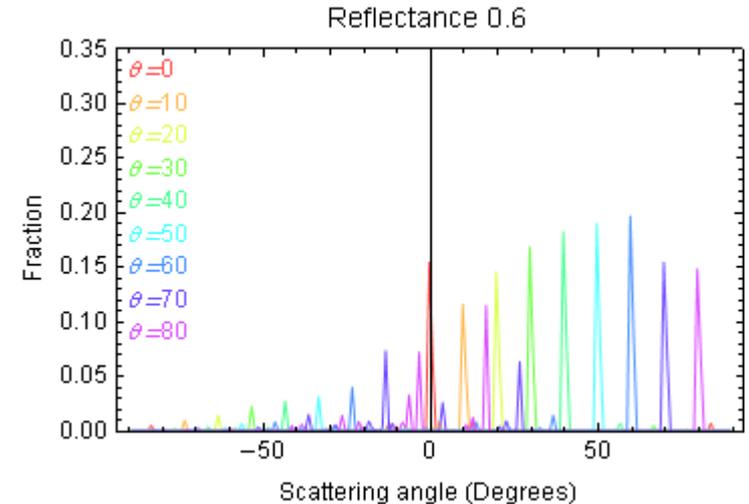

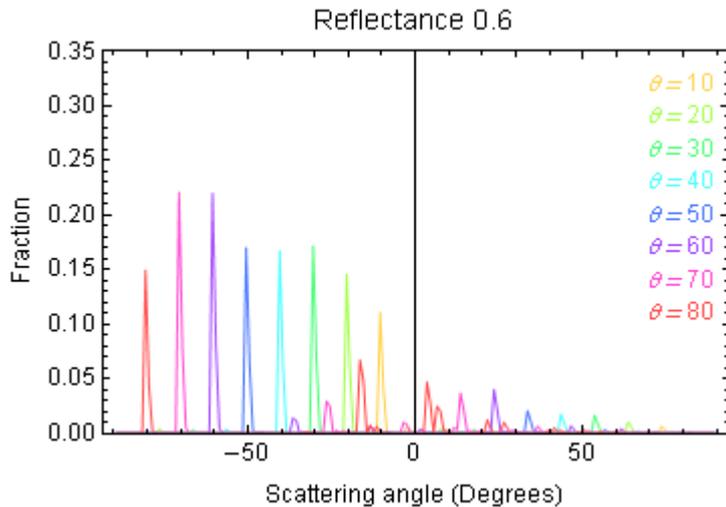

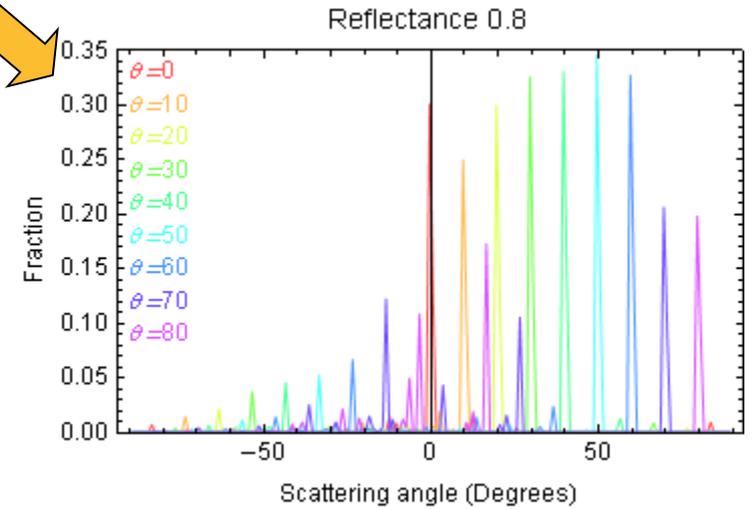

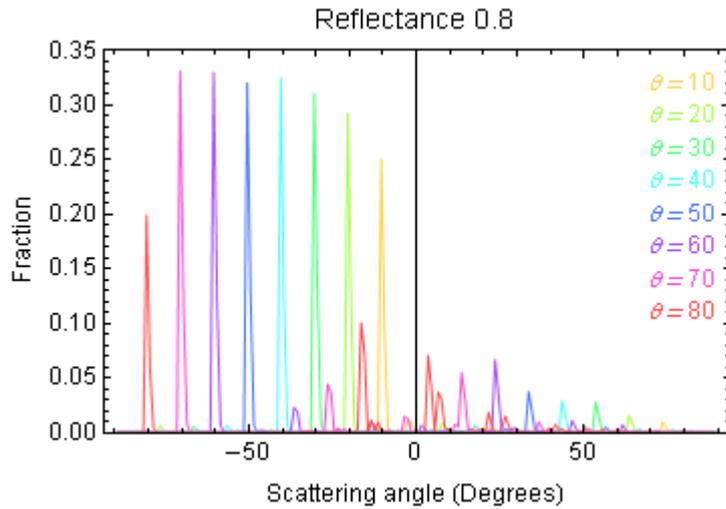

Tacymeter measurements: 0 ... 50 m

Plate measurements: 0 ... 1 m

# Snow surface directional reflection at NorSEN mast

# Albedo from pyranometer data

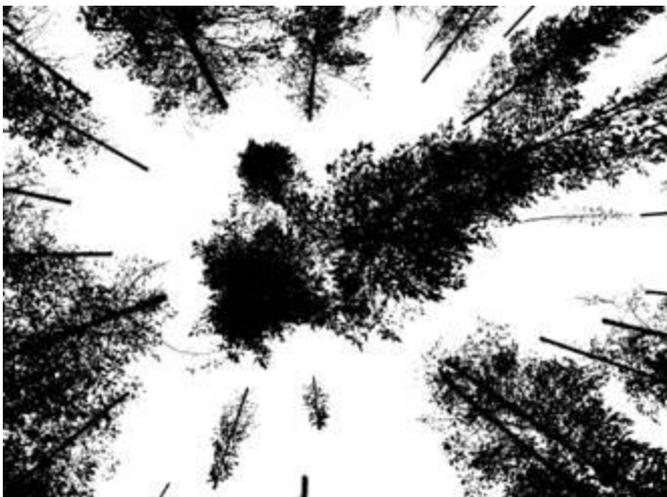

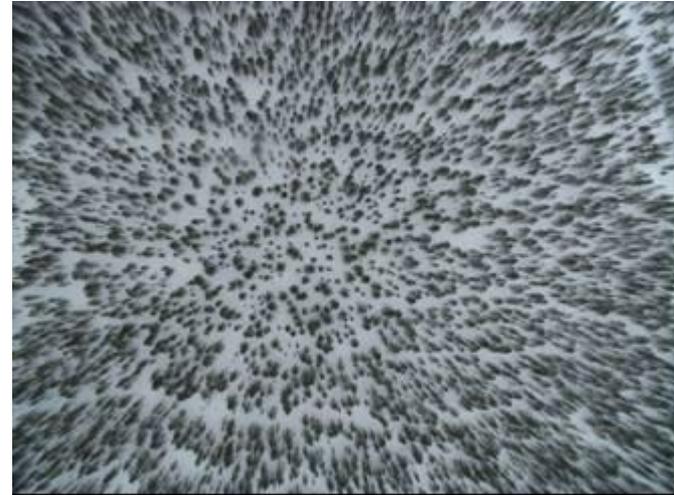

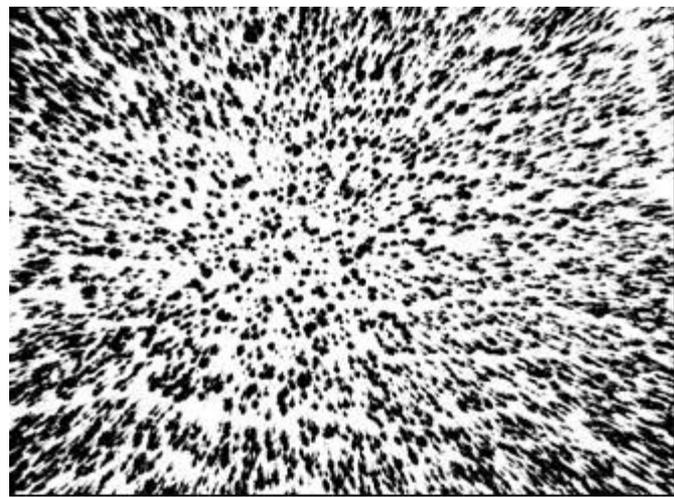

# Example of original and thresholded images of one vertical profile of Karhukamera

Altitude  
25 m

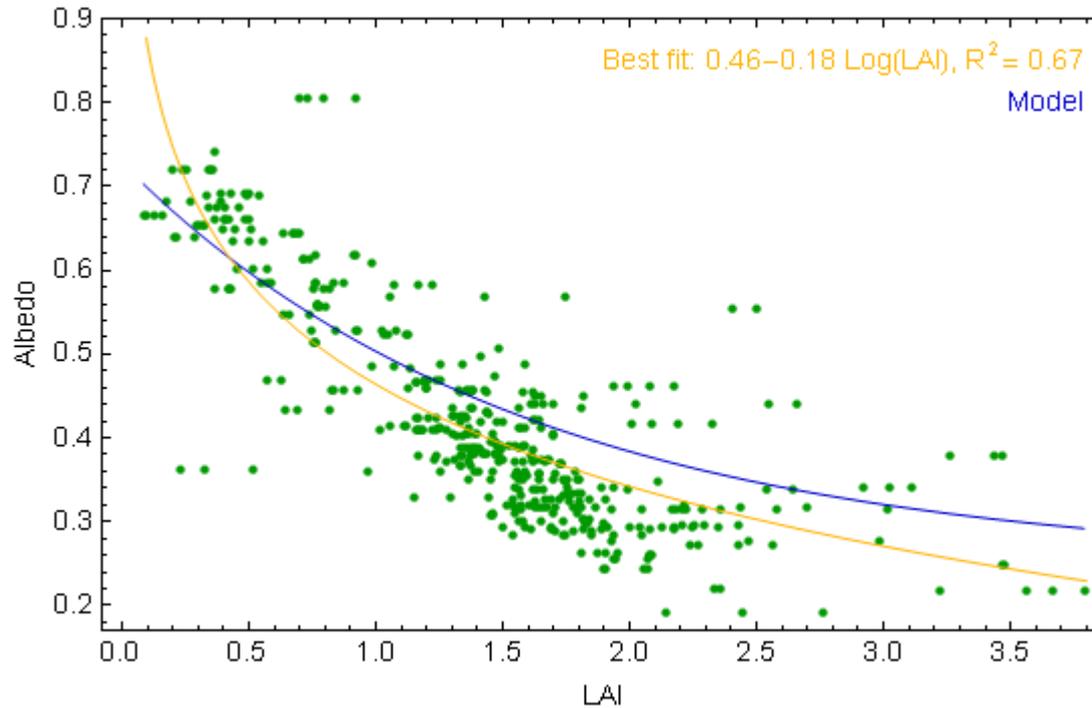

Altitude  
210 m

# Airborne white-sky albedo vs. LAI profiles

# Conclusions

- **Lots of good data to analyze => a lot of work**
- **First publications have come out**
  - **General campaign description:**
    - Roujean, J.-L., Manninen, T., Kontu, A., Peltoniemi, J., Hautecoeur, O., Riihelä, A., Lahtinen, P., Siljamo, N., Suokanerva, H., Sukuvaara, T., Kaasalainen, S., Aulamo, O., Aaltonen, V., Thölix, L., Karhu, J., Suomalainen, J., Hakala, T., and H. Kaartinen, 2009. **SNORTEX (Snow Reflectance Transition Experiment): Remote sensing measurement of the dynamic properties of the boreal snow-forest in support to climate and weather forecast: report of IOP-2008**. 2009 IEEE International Geoscience & Remote Sensing Symposium, July 12-17, Cape Town, South Africa (Paper 1167).
